

## Guidance for Protective Eyewear

1. Always perform a risk assessment prior to your client interaction to determine if protective eyewear is required.
2. Protective eyewear is required any time a physical distance of 2 metres can not be maintained.
3. Protective eyewear must be donned **before** interaction with clients.

Options	Consideration in Selections
<p><b>Face shields</b></p> 	<p><b>Face shields</b> are <b>preferred</b> as they cover the maximum area of the face to reduce exposure from splash, spray or droplets to both the eyes and face. A single-use face shield can be re-used by the <b>SAME</b> user until it becomes cracked or visibility is compromised. Label your face shield.</p>
<p><b>Goggles</b></p> 	<p><b>Goggles</b> with a snug fit around the eyes or a face shield that covers the front and sides of the face provide the most reliable eye protection from splashes, sprays, and respiratory droplets. (The characteristics of the goggles that make them the <b>most reliable protection</b> for the wearer do result in concerns with comfort during extended periods of use.)</p>
<p><b>Safety glasses</b></p> 	<p><b>Safety glasses</b> do not provide the same level of protection from splashes, sprays, and droplets as goggles or face shields, and generally should not be used for infection control purposes. They are not recommended for close clinical contact, especially if the client is unmasked. If you use them, be aware that there will be gaps close to your eyes between the glasses and your face.</p>

- ❖ **If you wear prescription glasses**, use a face shield or goggles that fit snugly, with no gaps between the protective equipment and your face.

### Additional Guidance for the Use of Protective Eyewear

- Ensure eye protection and respirator or mask compatibility so that there is no interference with the proper positioning of the eye protection or with the fit or seal of the respirator or mask. Remove eye protection after the client has left, unless implementing extended use.

- Use of eye protection can be extended. Eye protection should be cleaned and disinfected, prior to changing your mask or respirator, when going to breaks or meals, and at the end of a shift.
- As needed, replace eye protection when soiled or damaged. All eye protection must be **cleaned and disinfected** between uses – see below and refer to [Public Health Ontario's Cleaning and Disinfection of Reusable Eye Protection](#).

## Cleaning and Disinfecting Protective Eyewear

- Use hospital grade cleaner/disinfectant wipes. A drug identification number (DIN) or natural product number (NPN) on the product label indicates it has been approved for use by Health Canada
- Review the product label to determine whether wipes are a one step cleaner and disinfectant or whether two steps are needed (one wipe to clean and a new wipe to disinfect) and the required contact time (time the surface must remain wet)
- It is recommended to obtain a one step product with a practical contact time (less than 5 minutes)

## Steps for Cleaning and Disinfecting

1. Perform hand hygiene prior to removing eye protection.
2. When removing eye protection, reach up behind the head or side of head; do not touch the front of the contaminated eye protection.
3. Place eye protection on a non-porous surface.
4. Perform hand hygiene and don gloves.
5. Using a hospital grade cleaner/disinfectant wipe in one hand and the other hand to pick up eye protection, carefully **wipe the inside** surface of eye protection, then **wipe the outside** surface of the eye protection. Discard wipe.
6. Still holding eye protection in the same hand, use the other hand and take a new hospital grade disinfectant wipe to clean/disinfect the surface where the contaminated eye wear was placed during cleaning. Discard wipe.
7. Place clean eye protection on clean surface and allow to sit for the required contact time.
8. Remove gloves and perform hand hygiene.
9. If visibility is compromised by residual disinfectant, eye protection can be rinsed with tap water or wiped with 70-90% alcohol.
10. Allow eye protection to dry prior to next use. When dry, store in labelled paper or plastic bag.
11. Store in a designated clean area in a manner to prevent contamination.
